## **PREFACE AND ACKNOWLEDGEMENTS**

The 2010 Population and Housing Census (PHC) is the fifth census conducted since independence. Previous post-independence censuses were conducted in 1960, 1970, 1984 and 2000. The 2010 PHC was carried out with reference to 26<sup>th</sup> September 2010 as the census night. Enumeration was completed in November, 2010 and data processing ended in May, 2012. To facilitate optimal use of the data collected, the Ghana Statistical Service (GSS) will release a set of statistical tables in accordance with the census tabulation plan. GSS will also undertake further analysis of the census data, produce analytical and thematic reports and ensure that they are widely disseminated.

The Demographic, Social, Economic and Housing Characteristics Report is the third in the series of publications to be released from the 2010 Population and Housing Census. It contains detailed tables required by most Ministries, Departments and Agencies (MDAs), Metropolitan, Municipal and District Assemblies (MMDAs), Development Partners, the private sector, researchers and other stakeholders for policy formulation, planning, programme implementation, monitoring and evaluation of programmes.

The report presents information on demographic, social, economic characteristics and housing conditions of the population for the entire country and the ten administrative regions. It also includes data on emigration, ICT, deaths in the household in the last 12 months, disability and agricultural activities which were included for the first time in the 2010 census.

The conduct of any exercise of the magnitude of a census would not have been possible without the massive mobilization and utilization of human and material resources. We therefore, wish to express our profound appreciation to all the individuals and organisations that contributed to the effective planning, organisation and implementation of the census.

We particularly wish to thank the Ministry of Finance and Economic Planning, the Controller and Accountant-General's Department and the Bank of Ghana for releasing funds for the census. Our gratitude also goes to the Ministry of Education, Ministry of Information, Ministry of Defence, Ministry of Interior, the Ghana Education Service, National Identification Authority, Electoral Commission, Ghana Armed Forces, Ghana Police Service, Ghana Immigration Service, Ghana National Fire Service, Information Services Department, National Commission for Civic Education and all other MDAs and MMDAs for the roles they played at different stages of the census.

We acknowledge the immense contributions of the United Nations Population Fund (UNFPA), Department for International Development (UK-DFID), European Union (EU), United Nations Development Programme (UNDP), United Nations Children's Fund (UNICEF), and the Embassy of the People's Republic of China. We also wish to acknowledge project funding support for the census data analysis from the Danish International Development Agency (DANIDA) and Canadian International Development Agency (CIDA).

We are grateful to the media in general and the UNFPA supported Media Communication and Advocacy Network (MCAN) for publicising the census activities and conveying messages from the public to the Ghana Statistical Service which greatly enhanced the

conduct of the census. We also wish to thank chiefs and community leaders as well as the general public for their cooperation.

We are indebted to the field personnel, the census monitors, Regional and District Census Officers, Regional and District Administrative Offices, Regional and District Census Committees, National Census Steering Committee, National Publicity and Education Committee, and the Census Technical Advisory Committee for the roles they played in the implementation of the census. To all Consultants who were engaged on the various aspects of the census, we are most grateful.

Finally, we wish to express our appreciation to all GSS staff for their dedication.

**DR. PHILOMENA NYARKO**

## **2010 Population & Housing Census Publications**

### **A. Basic Tables**

1. Provisional Results
2. Summary Report of Final Results
3. Demographic, Social, Economic and Housing Characteristics (National)
4. Demographic, Social, Economic and Housing Characteristics (Regional: 10 Volumes one for each region)
5. The Gazetteer: Alphabetical List of Localities with Statistics on their Population, Number of Houses and Households and Average Household Size
6. Special Report on Localities

### **B. Census Methodology and Maps**

7. Administrative Report
8. Atlas of Population Characteristics

### **C. Analytical Reports**

9. National Analytical Report
10. Regional Analytical Report (10 Volumes, One for each region)
11. District Analytical Report (170 Volumes, One for each district)
12. Thematic Reports (Monographs)

# CHAPTER ONE

## PAST POPULATION COUNTS AND CENSUSES IN GHANA

### 1.1 PRE-INDEPENDENCE POPULATION COUNTS AND CENSUSES

Population censuses, together with intercensal national household sample surveys, are the major sources of demographic and socio-economic data in the country. Regularity in the conduct of censuses and surveys ensures availability of essential information for the formulation, monitoring and evaluation of the country's socio-economic development programmes on a continuous basis.

Ghana has had a long history of population data collection. The 1891 census was the first official census in the then Gold Coast. This tradition continued at intervals of 10 years until the Second World War interrupted the series. The next census in the Gold Coast after the one in 1931 was, therefore, conducted in 1948. A census should have been conducted in 1958, a year after independence, but was deferred and subsequently carried out in 1960. The 1960 census became the base of the current census series, although the one for 1980 was delayed until 1984.

### 1.2 THE 1960 POPULATION CENSUS

The first post-independence census in Ghana was conducted in 1960, three years after the country's attainment of independence.

The 1960 Census was the first census to combine all the essential features of a modern census. These included Government sponsorship, universality within a defined territory, simultaneity of enumeration with a well-defined time reference, clearly defined place reference, individual units of enumeration, defined periodicity and compilation and publication of results.

Three phases of the 1960 Census could be distinguished: the preliminary operations; the main census enumeration and processing; and the post enumeration checks and analysis.

The major preliminary operations were as follows:

- *Geographical operations* consisted of field surveying and checking of lists of localities, dividing up the country into enumeration areas (EA), production of maps and lists of localities by EA.
- *The field test* was conducted as a first stage in the testing of the census questionnaire, the definition of concepts and the instructions for completing the questionnaire and for obtaining data for preparing more realistic estimates of the various components of the cost of the census.
- *Census education campaign* was through radio, cinema vans, the press and other communication media.

- *The trial census* served as a rehearsal for the main operation and the final test of the census field organization, instructions and procedures.
- *Recruitment and Training of Field staff.*

The enumeration was conducted with reference to the midnight of 20th March, 1960 as the census night, although the whole enumeration took about six weeks, from 21st March to about the end of April, 1960.

The canvassing method of enumeration was used, with about 7,000 enumerators (excluding reserves), going from house to house to complete in “line questionnaire”, for each person, 11 statistical items (in addition to the name). These were: address of place of enumeration, sex, age, place of birth, country of origin, tribe, school attendance, type of economic activity, industry, occupation and employment status. The “house” or “compound” was the unit of listing and enumeration. Members of a “house” or “compound” were, therefore, enumerated together on the same questionnaire.

Post Enumeration Sample Survey (PES) was carried out on 5 percent of the houses within three months of the main census. The PES field enumeration lasted from 8th June to the middle of July 1960, and had the objective of measuring the error (in both coverage and content) of the main Census, as well as to enquire into additional topics that could not be included in the main Census.

### **1.3 THE 1970 POPULATION CENSUS**

The 1970 Population Census also had all the essential features of a modern population census, as set out in the United Nations *Principles and Recommendations for the 1970 Population Censuses*.

The census enquired into the following topics: name, sex, age, place of birth, relationship to head of household, nationality, school attendance, educational attainment, type of activity, occupation, and industry and employment status.

The census night was the midnight of 1<sup>st</sup> March 1970, and enumeration activities began with the interviewing of the floating population such as outdoor sleepers. The enumeration of persons in households commenced after 6 a.m. on 2<sup>nd</sup> March 1970 and continued for about a month in most parts of the country.

Independent evaluation checks were undertaken as part of the 1970 census to evaluate not only the coverage but also the content error of the Census. In addition, a Supplementary Enquiry on a sample basis was undertaken between August and September 1971, to collect additional information on the geographic, economic, personal and household characteristics, as well as the housing conditions of the population.

## 1.4 THE 1984 POPULATION CENSUS

The third post-independence census was undertaken in 1984. The information collected during the census included the name, sex, age, and other characteristics of the population, as well as the size and composition of the households. In addition, the census collected information on the main source of water supply, housing, education and health facilities in each locality.

The census programme can be divided into three parts: the pre-enumeration, the enumeration and the post- enumeration activities.

The principal activities in the pre-enumeration operations covered the following:

- *Geographic field operations* involved the revision of the enumeration area (EA) maps, which commenced in March 1980, with field trips by geographic teams to all the EAs. The exercise entailed splitting the existing large EAs into two or more units, combining two or more small units into one, or making adjustments to the boundaries of contiguous EAs.
- *The trial census* was conducted in August – September 1981 as a rehearsal for the main census. Its principal objective was to test all aspects of the main census programme from data collection in the field to the clerical and electronic data processing in the office.
- *The Census education and publicity programme* was designed to enlighten the public and to solicit their maximum cooperation for a successful census operation. Radio, television and newspaper announcements, a census song (jingle), handbills and posters were used in the campaign. A total of 1,394 education and publicity staff were engaged for the exercise.
- *Recruitment and training of field staff* who were mainly school teachers and staff of the Department of Community Development began in September 1983. A three-phased census-training programme was mounted, beginning with the training of senior census personnel followed by the training of field supervisors. Finally, the enumerators numbering about 16,500 were trained at district and locality levels throughout the country. The three training courses involved nearly 17,000 participants.

The 1984 Population Census also had all the essential features of a modern population census as prescribed in the United Nations *Principles and Recommendations for the 1980 Round of Population Censuses*.

## 1.5 THE 2000 POPULATION CENSUS

The 2000 Population and Housing Census, like all the post-independence censuses, had all the essential features of a modern population census as recommended in the United Nations *Principles and Recommendations for the 2000 Round of Population Censuses*. It was the first time a population census was combined with a housing census. The information collected by the census included name, sex, age, literacy and other characteristics of the population, as

well as the size and composition of the households. In addition, the census collected information on the main source of water supply and the availability of educational, health and other facilities in each locality. In localities where there were no such facilities, information on the distance to the nearest facility was collected.

The three major phases of the 2000 Population and Housing Census were: pre-enumeration, enumeration and post-enumeration as in the previous censuses.

### **Pre-enumeration Operations**

- *Establishment of census machinery:* The initial major preparatory activity was the setting up of the census administrative and planning organization. A National Census Secretariat was established at the Statistical Service. The Secretariat was staffed with professional and technical staff from various divisions of the Service and other government agencies. A Census Coordinator was appointed to be in charge of the day-to-day census operations. In addition to the National Census Secretariat, four national committees were set up to assist in the conduct of the census in the following areas: Publicity and Education, Technical Advisory, Census Planning, and Management and disbursement of resources and procurement.
- *Cartography:* The cartography component involved updating of the 1984 census enumeration and supervision areas (EAs and SAs). This activity started in 1995 and ended in February 2000. The cartographic work was based on the administrative structure of the country, comprising the ten administrative regions, sub-divided into a total of 110 districts. The enumeration areas were delineated, with an estimated average size of 750 persons per EA. In total, the field mapping exercise yielded 26,716 EAs.
- *Determination of topics and development of instruments:* The National Census Secretariat reviewed topics investigated in previous censuses, and held consultations with major data users. The Secretariat then developed the questionnaires and instruments in line with the recommendations for the 2000 round of population and housing censuses.
- *Census education and publicity:* The Publicity and Data Dissemination Unit of the Secretariat coordinated the preparation and implementation of a publicity and education programme to sensitize and motivate the population to respond positively to the census.
- *Other pre-enumeration activities:* These included the recruitment and training of the various categories of the field staff, the packaging and distribution of enumeration materials and the deployment of field staff. Furthermore, the data capture equipment was installed and tested.
- *Census field tests:* Census field tests were completed before the various documents, procedures and programmes were finalized for use during the census enumeration and post-enumeration phases. The Trial Census tested the adequacy of the entire census plan and organization: forms, maps, manuals, training, methodology, distribution of materials, field data collection, quality control, check-in procedures and the entire automated processing system from data capture to table generation. The Trial Census

took place in July 1999, which allowed for sufficient time to review, prepare for, and implement all subsequent activities.

- *Pilot Post Enumeration Survey (PES)*: A pilot post-enumeration survey (pilot PES) was implemented one month following the trial census (August 1999) in a sub-sample of the enumeration areas covered in the trial census to test the PES operations, forms and manuals. The pilot PES also evaluated the trial census.

## **Enumeration**

The main census enumeration involved trained enumerators interviewing the population using census questionnaires. Specific arrangements were made for the coverage of special population groups, such as the homeless and the floating population. The fieldwork began on 19<sup>th</sup> March 2000 with the identification of EA boundaries, listing of structures, enumeration of institutional population and floating population, and continued with the enumeration of the household population after Census Night (26<sup>th</sup> March 2000). The enumeration exercise lasted two weeks for most parts of the country. A mopping-up exercise to cover uncompleted areas, about 10 per cent of the total area, mainly in Accra and Tema was carried out through to the end of April 2000.

## **Post-enumeration**

The post-enumeration activities, which constituted the final phase of the census process, primarily involved the processing, evaluating and analyzing the census data, and the publication and dissemination of the census results. The completed questionnaires and other census documents were collected and checked by supervisors, after which they were sent to the Head Office in Accra, for processing and preparation of the preliminary report.

*Data Processing*: Questionnaires sent to the Data Processing Unit were checked, using the automated control system CENTRACK to verify that data returns from all the enumeration areas (EAs) had been received, and to account for missing questionnaires. The questionnaires were edited, scanned, and the data run through validation programmes to produce a “clean” data file for tabulation.

*Evaluation and analysis of the census data*: The programme for the evaluation of the census information included a post-enumeration survey in a sample of EAs to estimate census content and coverage error. This was conducted three months after the completion of the census enumeration.

*Publication and dissemination of census data*: In addition to statistical tables, the publication programme included special analytical reports highlighting the key results for general readers and decision-makers. The census results were disseminated through press releases, radio/TV discussions and seminars/workshops.

## **CHAPTER TWO**

### **OBJECTIVES AND SCOPE OF THE 2010 POPULATION AND HOUSING CENSUS**

#### **2.1 Objectives**

The primary objective of the 2010 Population and Housing Census (PHC) was to provide information on the number and distribution as well as the demographic, social, economic characteristics and housing conditions of the population of Ghana.

#### **2.2 Census Activities**

The Census was conducted using all the essential features of a modern census as contained in the United Nations Principles and Recommendations for countries taking part in the 2010 Round of Population and Housing Censuses. Experiences from previous post independent censuses in Ghana (1960, 1970, 1984 and 2000) were taken into consideration in developing the methodology for conducting the 2010 PHC. The 2010 PHC involved a series of interrelated activities that can be classified into three major phases: Pre-enumeration, Enumeration and Post-enumeration.

##### **2.2.1 Pre-enumeration Activities**

###### *Development of census project document and work plans*

A large scale statistical operation such as the 2010 Population and Housing Census requires meticulous planning for its successful implementation. A census project document was, therefore, developed to guide the implementation of the 2010 PHC. The project document included the rationale, objectives and procedures for organizing the census. It also spelt out the work plan, budget, activity timelines, well defined responsibilities and critical paths to guide and monitor implementation of activities identified. . The project document was launched in November 2008 as part of the Ghana Statistics Development Plan (GSDP).

###### *Census secretariat and committees*

To implement the 2010 PHC, a National Census Secretariat was set up in January 2008 and comprised professional and technical staff of GSS as well as staff of other Ministries, Departments and Agencies (MDAs) seconded to GSS. Two teams were established within the census secretariat. These were (a) the Census Management Team which had oversight responsibility for the implementation of the Census and (b) the Census Coordinating Team which was responsible for the day-to-day implementation of the Census programme. GSS was assisted by oversight and advisory committees. These were the National Census Steering Committee (NCSC), the National Census Technical Advisory Committee (NCTAC) and the National Census Publicity and Education Committee (NCPEC). At the regional and district levels, the Regional Census Implementation Committees and the District Census Implementation Committees were respectively constituted.

### ***Cartographic Activities***

The country was delineated into enumeration areas to facilitate the smooth enumeration of the population. The process involved updating the 2000 Census Enumeration Area (EA) maps. This activity started in the last quarter of 2007 with the acquisition of topographic sheets of all indices from the Survey and Mapping Division of the Lands Commission. In addition, digital sheets were procured for the Geographical Information System Unit. Field cartographic work was completed in February 2010.

A 10-digit coding system was adopted for coding enumeration areas in the 2010 PHC as was done in 2000. This system uniquely identified each EA by region, district, district type and sub-district. Office editing of sketch maps, coding and reproduction of enumeration area maps was done alongside the field work. Map reproduction activities were completed by the middle of September 2010. In all, a total of 104,951 localities, 37,641 enumeration area maps and 6,733 supervision area maps were produced for the country.

### ***Development of questionnaire and manuals***

The National Census Secretariat reviewed topics investigated in previous censuses, and held consultations with major data users in the public and private sectors and reviewed the UN recommendations for the 2010 round of censuses in order to determine the topics to be covered in the 2010 PHC. Subsequently, the secretariat developed the questionnaires and manuals and other documents essential for the collection, processing, evaluation and analysis of census information.

### ***Census Field Tests***

The census questionnaire was pre-tested twice in the course of its development. The first pre-test was carried out in March 2009 to find out the suitability of the questions and the instructions provided. It also tested the clarity of the questions and the adequacy and completeness of the responses. The second pre-test was done in 10 selected enumeration areas in August 2009. The objective of the second pre-test was to examine the sequence of the questions, test the new questions, such as date of birth and migration, and assess how the introduction of 'date of birth' could help to reduce 'age heaping'. With regard to questions on fertility, the pre-tests sought to find out the difference, if any, between proxy responses and responses by the respondents themselves. Both pre-tests were carried out in the Greater Accra Region. Experience from the pre-tests was used to improve the final census questionnaire.

A trial census is basically a dress rehearsal of all the activities and procedures that are planned for the main census. These include recruitment and training, distribution of census materials, administration of the questionnaire and other census forms, enumeration of the various categories of the population (household, institutional and floating population), and data processing. The trial census for the 2010 PHC was held in October/November 2009 in six selected districts across the country, namely Saboba (Northern Region), Chereponi (Northern Region), Sene (Brong Ahafo Region), Bia (Western Region), Awutu Senya (Central Region), and Osu Klotey Sub-Metro (Greater Accra Region). Lessons learned from the trial census were incorporated into the main census questionnaires, forms and procedures.

In May 2010, GSS in collaboration with the United Nations Population Fund conducted a special test in Awutu Senya District of the Central Region to find out whether responses to questions on life time fertility could generate useful data. Field personnel were trained to test the hypothesis that questions on children ever born and children surviving could be asked in a

Ghanaian census setting and the responses would generate usable and good quality data. The results from this test showed that there were no significant differences between the responses given by proxy and the responses provided by the eligible women themselves. Based on this finding, lifetime fertility questions were re-introduced into the questionnaire.

### ***Acquisition and distribution of census materials***

The 2010 PHC procurement activities mainly covered the procurement of goods, services and equipment as per the Procurement Plan of 2009. GSS liaised with organisations that had the capacity to transport large volumes of materials to all parts of the country, namely Ghana Armed Forces, the Electoral Commission and Ghana Highway Authority. These organizations assisted in transporting census materials to all the regions and districts.

### ***Publicity and Education***

The objectives of the census education campaign were two-fold: first, to sensitize the public on the importance of the census and the confidentiality of the information provided; second, to create awareness on the census topics/questions and to solicit support from the public for the enumeration. The publicity programme was implemented in two phases. Phase one was the publicity for the trial census which was restricted to the six trial census districts. The publicity was mostly through direct community contact as some of the trial census districts were rural districts with majority of the people having no access to radio or television. Interpersonal communication using Information Services Department vans and ‘gong-gong beaters’ was, therefore, the main source of getting the trial census messages to the people. Phase two was the publicity for the main census which was intensified after the trial census. This included sensitization workshops and seminars for civil society groups, religious leaders, community leaders; seminars; television and radio programmes; use of public address systems to convey census messages; and distribution of census T-shirts.

Publicity materials used for the main census publicity included jingles, posters, banners, car stickers, brochures, handbills and flyers. These materials were distributed freely nation-wide through the Regional and District Offices of GSS, and Regional and District Census Implementation Committees. The Census Night, Sunday, 26 September 2010, was observed nation-wide with various activities to create public awareness on the commencement of the census and also for people to remember census night since information on the census was with reference to that night.

### ***Recruitment and Training of Census Personnel***

An online recruitment process was adopted for the recruitment of the 2010 census field personnel. Interested persons completed an online application form and qualified candidates were shortlisted and interviewed in the district of their choice.

A four-tier training programme was implemented given the large number of personnel that had to be trained for the census enumeration. In the first tier, GSS trained about 50 national level trainers. These, together with senior officials of GSS, formed the core of trainers who trained about 250 regional level trainers. The regional level trainers then trained about 2000 district level trainers who in turn trained about 50,000 enumerators, supervisors and senior supervisors. These district level trainers were mainly officials of the Ghana Education Service (GES) and MDAs. An instructional manual was developed to standardize the training of the field personnel in all the districts.

## **2.3 Census Enumeration**

All the post independent censuses (1960, 1970, 1984, and 2000) conducted in Ghana used the de facto method of enumeration where people were enumerated at where they were on census night and not where they usually reside. The same method was adopted for the 2010 PHC.

The main census enumeration involved the canvassing of all categories of the population by trained enumerators, using questionnaires prepared and tested during the pre-enumeration phase. Specific arrangements were made for the coverage of special population groups such as the homeless and the floating population. The fieldwork began on 21<sup>st</sup> September 2010 with the identification of EA boundaries, listing of structures, enumeration of institutional population and floating population. The enumeration of the household population took place after Census Night (26<sup>th</sup> September 2010). The enumeration exercise was designed to last for two weeks but in view of the initial questionnaire shortage, it lasted about four weeks in most parts of the country. A mopping-up exercise to cover uncompleted areas, mainly in Accra, Tema and Kumasi was carried out through to the end of November 2010.

### **Monitoring of field work**

Officers from the Census Secretariat, including Consultants and United Nations staff, were trained as Census Monitors. They monitored the census field work to ensure complete coverage and the collection of good quality data.

An additional quality control measure was adopted in four regions (Greater Accra, Central, Western, and Ashanti) after the end of enumeration. Field supervisors moved from house to house in all the EAs in some selected districts to ascertain whether structures had been listed and households enumerated. Unlisted structures/households were tagged and enumerated.

## **2.4 Post Enumeration Activities**

### **Retrieval of Census materials**

After enumeration, the completed questionnaires, summary forms (PHC3 & PHC4) and other census materials were submitted to the supervisors who checked them with the material receipt form and forwarded them to the District Census Officer. The District Officer in turn submitted the completed questionnaires to the Regional Census Office for onward transmission to the Census Secretariat. The PHC3 forms were dispatched to the Census Secretariat from which the provisional results were compiled.

### **Data Processing**

A sample check on the questionnaires conducted at the head office revealed the need for further editing and coding/recoding of occupation and industry before the questionnaires could be scanned. GSS had selected scanning as the preferred method of data capture similar to what was done for the 2000 census. Data processing took place between July 2011 and April 2012. The final results were released in May 2012.

### **Post Enumeration Survey**

In line with United Nations recommendations, GSS conducted a Post Enumeration Survey (PES) in April, 2011 to assess content and coverage errors associated with the 2010

Population and Housing Census. The PES was conducted on a sample of 250 (0.67%) out of the 37,642 enumeration areas in the country. Information was collected on name, sex, age, relationship to head of household and marital status. The results of the PES were published in December 2012.

### **Publication, Data Analysis and Report Writing**

In addition to statistical tables, the publication programme includes national, regional and district analytical and thematic reports. These reports highlight the key results for general readers and decision-makers. In the first phase of the publication programme, one National, 10 Regional and six Thematic Reports have been prepared through conference report writing. The second phase will produce eight more thematic reports as well as 170 District Analytical Reports. Provision has also been made for the dissemination of the census data, and analytical and thematic reports through seminars and workshops, GSS website, press releases, radio/TV discussions and other fora.

## **CHAPTER THREE**

### **CONCEPTS AND DEFINITIONS**

#### **3.1 Introduction**

The 2010 Population and Housing Census of Ghana followed the essential concepts and definitions of a modern Population and Housing Census as recommended by the United Nations (UN). It is important that these concepts, definitions and recommendations are adhered to since they form the basis upon which Ghana can compare her data with those of other countries.

The concepts and definitions in this report cover all sections of the 2010 Population and Housing Census questionnaires (PHC1A and PHC1B). The sections include geographical location of the population, Household and Non-household population, Literacy and Education, Emigration, Demographic and Economic Characteristics, Disability, Information and Communication Technology (ICT), Fertility, Mortality, Agricultural Activity and Housing Conditions.

The concepts and definitions are provided to facilitate understanding and use of the data presented in this report. Users are, therefore, advised to use the results of the census within the context of these concepts and definitions.

#### **3.2 General Characteristics**

##### **Region**

There were ten (10) administrative regions in Ghana during the 2010 Population and Housing Census as they were in 1984 and 2000.

##### **District**

In 1988, Ghana changed from the local authority system of administration to the district administrative system. In that year, the then existing 140 local authorities were demarcated into 110 districts. In 2004, 28 new districts were created; this increased the number of districts in the country to 138. In 2008, 32 additional districts were created bringing the total number of districts to 170. The 2010 Population and Housing Census was conducted in these 170 administrative districts, made-up of 164 districts/municipals and 6 metropolitan areas. The 6 metropolitan areas have in total 33 sub-metros which the Statistical Service considered as districts for the purpose of the exercise. Thus, the total number of statistical districts was 197.

##### **Locality**

A locality is defined as a distinct population cluster (also designated as inhabited place, populated centre, settlement) which has a **NAME** or **LOCALLY RECOGNISED STATUS**. It included fishing hamlets, mining camps, ranches, farms, market towns, villages, towns, cities and many other types of population clusters, which meet the above criteria.

## **Types of locality: Urban and Rural**

There were two types of locality, rural and urban. As in previous censuses, the classification of localities into urban and rural was based on population size. Localities with 5,000 or more persons were classified as urban while localities with less than 5,000 persons were classified as rural.

### **3.3 Demographic Characteristics**

#### **Population**

The census was a “de facto” count and each person present in Ghana, irrespective of nationality, was enumerated at the place where he/she spent the midnight of 26th September 2010.

#### **Household**

A household is defined as a person or a group of persons, who live together in the same house or compound and share the same catering arrangements. In general, a household consists of a man, his wife, children and some other relatives or a house help who may be living with them. However, it is important to remember that members of a household are not necessarily related (by blood or marriage) because nonrelatives (e.g. house helps) may form part of a household.

#### **Head of Household**

A household head is defined as a male or female member of the household recognised as such by the other household members. The head of household is generally the person who has economic and social responsibility for the household. All relationships are defined with reference to the head.

#### **Household and Non-household population**

Household population comprises of all persons who spent the census night in a household setting. All persons who did not spend the census night in a household setting were classified as non-household population. Persons who spent census night in any of the under listed institutions and locations were classified as non-household population:

- (a) Educational Institutions
- (b) Children's and Old People's Homes
- (c) Hospitals and Healing Centres
- (d) Hotels
- (e) Prisons
- (f) Service Barracks
- (g) Soldiers on field exercise
- (h) Floating Population: The following are examples of persons in this category:
  - i. All persons who slept in lorry parks, markets, in front of stores and offices, public bathrooms, petrol filling stations, railway stations, verandas, pavements, and all such places which are not houses or compounds.
  - ii. Hunting and fishing camps.
  - iii. Beggars and vagrants (mentally sick or otherwise).

## **Age**

The age of every person was recorded in completed years disregarding fractions of days and months. Thus, a person aged 29 years 11 months is recorded as aged 29 years. Similarly, infants aged less than one year, are recorded as being “0” year old. For those persons who did not know their birthdays, the enumerator estimated their ages using a list of district, regional and national historical events.

## **Nationality**

Nationality is defined as the country to which a person belongs. A distinction is made between Ghanaians and other nationals. Ghanaian nationals are grouped into Ghanaian by birth, Ghanaian with dual nationality and Ghanaian by naturalization. Other nationals are grouped into ECOWAS nationals, Africans other than ECOWAS nationals, and non-Africans.

## **Ethnicity**

Ethnicity refers to the ethnic group that a person belongs to. This information is collected only from Ghanaians by birth and Ghanaians with dual nationality. The classification of ethnic groups in Ghana is that provided by the Bureau of Ghana Languages and which has been in use since the 1960 census.

## **Birthplace**

The birthplace of a person refers to the locality of usual residence of the mother at the time of birth. If after delivery a mother stayed outside her locality of usual residence for six months or more or had the intention of staying in the new place for six or more months, then the actual town/village of physical birth becomes the birthplace of the child.

## **Duration of Residence**

Duration of residence refers to the number of years a person has lived in a particular place. This question is only asked of persons not born in the place where enumeration took place. Breaks in duration of residence lasting less than 12 months are disregarded.

## **Religion**

Religion refers to the individual’s religious affiliation as reported by the respondent, irrespective of the religion of the household head or the head’s spouse or the name of the person. No attempt was made to find out if respondents actually practiced the faith they professed.

## **Marital Status**

Marital status refers to the respondent’s marital status as at Census Night. The question on marital status was asked only of persons 12 years and older. The selection of the age limit of 12 years was based on the average age at menarche and also on the practice in some parts of the country where girls as young as 12 years old could be given out in marriage.

## **Literacy**

Literacy refers to a respondent’s ability to read and write in any language. A person is literate if he/she can read and write a simple statement with understanding. A person who cannot

read and write a simple statement is not literate. The question on literacy was asked only of persons 11 years and older.

### **Education**

In the context of the census, education means attendance at an institution where a person receives at least four (4) hours a day of general education in which the emphasis was not on acquisition of vocational skill or training for a trade. The definition excludes Night Schools, Motor Vehicle Driving Schools, Adult Literacy Schools, and on-the-job training establishments, such as the Auditor General's Training School, Labour College, the Commercial Bank Training School, and Arabic Schools, where only reading and writing of the Quran are taught.

#### ***School Attendance***

School attendance refers to whether a person has ever attended, is currently attending or has never attended school. Data were collected on school attendance for all persons three (3) years and older.

Although the lower age limit of formal education is six years for primary one, eligibility for the school attendance question was lowered to three years because pre-school education has become an important phenomenon in the country.

#### ***Level of Education***

Level of education refers to the highest level of formal school that a person ever attended or was attending. This information was obtained for persons 3 years and older.

## **3.4 Economic Characteristics**

### **Activity Status**

Activity status refers to economic or non-economic activity of respondents during the 7 days preceding census night. Information on type of activity was collected on persons 5 years and older. A person was regarded as economically active if he/she:

- a. Worked for pay or profit or family gain for at least 1 hour within the 7 days preceding Census Night. This included persons who were in paid employment or self-employment or contributing family workers.
- b. Did not work, but had job to return to.
- c. Was unemployed.

The economically not active refers to persons who did not work and were not seeking for work. They were classified by reasons for not being economically active. Economically not active persons included homemakers, students, retired persons, and persons who were unable to work due to their age or ill-health.

### **Occupation**

This refers to the type of work a person is engaged in at the establishment where he/she works. The question on occupation was asked only of persons 5 years and older who worked 7 days before the census night, and those who did not work but had a job to return to as well as those unemployed who had worked before. The emphasis was on the work the person did

during the reference period and not what he/she was trained to do. For those who did not work but had a job to return to, their occupation was the job they would go back to after the period of absence. Also, for persons who had worked before and were seeking for work and available for work, their occupation was the last work they did before becoming unemployed. If a person was engaged in more than one occupation, only the main one was considered.

### **Industry**

Industry refers to the type of product produced or service rendered at a respondent's work place. Information was collected only on the main product produced or service rendered in the establishment during the reference period.

### **Employment Status**

Employment status refers to the status of a person in the establishment where he/she currently works or previously worked. Eight employment status categories were provided: employee, self-employed without employees, self-employed with employees, casual worker, contributing family worker, apprentice, domestic employee (house help). Persons who could not be classified under any of the above categories were classified as "other".

### **Employment Sector**

This refers to the sector in which a person works. The employment sectors covered in the census were public, private formal, private informal, semi-public/parastatal, NGOs and international organizations.

### **Disability**

In the 2010 Census, disability was defined as a serious condition which limits the ability of persons to perform specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation. Persons with disability are those who are unable to or are restricted in the performance of specific tasks/activities. Information was collected on different forms of disability such as visual/sight impairment, hearing impairment, mental retardation, emotional or behavioural disorders and other physical challenges.

### **Information and Communication Technology (ICT): Individuals**

Information and Communication Technology (ICT) refers to access and use of mobile phones, internet facility and fixed telephone lines.

Persons having mobile phones are respondents 12 years and older who own mobile phones (irrespective of the number of mobile phones owned by each person). Persons using internet facility are those who have access to internet facility at home, internet cafe, on mobile phone or other mobile devices. Internet access is assumed not to be only via computer, but also by mobile phones, PDA, game machine and digital television.

### **Information and Communication Technology (ICT): Households**

Questions were asked about household ownership of desktop/laptop computers and fixed telephone lines. A fixed telephone line is a telephone line connecting a customer's terminal equipment (e.g. telephone set, facsimile machine) to the public switch telephone network.

## **Fertility**

Two types of fertility data were collected: lifetime fertility and current fertility. Lifetime fertility refers to the total number of live births that females 12 years and older had ever had during their life time. Current fertility refers to the number of live births that females 12-54 years old had in the 12 months preceding the Census Night.

## **Mortality**

Mortality refers to all deaths that occurred in the household during the 12 months preceding the Census Night. The mortality section of the 2010 census questionnaire was used to gather information on deaths due to accidents, violence, homicide and suicide. In addition, data were collected on pregnancy-related deaths of females 12-54 years.

## **Agriculture**

The census collected information on households engaged in agricultural activities for sale or family consumption. The activities were cultivation of crops or tree plants, rearing of livestock and breeding of fish. Information was also collected on farm size, types of crops and number and type of livestock.

### **3.5 Housing Characteristics**

#### **Housing Conditions and Facilities**

The UN recommended definition of a house as “a structurally separate and independent place of abode such that a person or group of persons can isolate themselves from the hazards of climate such as storms and the sun” was adopted. The definition, therefore, covered any type of shelter used as living quarters. Living quarters or dwelling units refer to a specific area or space occupied by a particular household and, therefore, need not necessarily be the same as the house of which the dwelling unit may be a part. Examples of living quarters are separate houses, semi-detached houses, flats/apartments, compound houses, huts, tents, kiosks and containers.

Information collected on housing includes the type of dwelling unit, main construction materials used for walls, floor and roof, holding/tenure arrangement, ownership type, type of lighting, source of water supply and toilet facilities. Data were also collected on method of disposal of solid and liquid waste.

# TABLES

**Table 1: Population by age, type of locality and sex**

Age	All Localities			Urban			Rural		
	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female
<b>All Ages</b>	<b>24,658,823</b>	<b>12,024,845</b>	<b>12,633,978</b>	<b>12,545,229</b>	<b>6,016,059</b>	<b>6,529,170</b>	<b>12,113,594</b>	<b>6,008,786</b>	<b>6,104,808</b>
0	731,201	370,320	360,881	356,683	180,060	176,623	374,518	190,260	184,258
1	622,871	318,102	304,769	287,830	146,613	141,217	335,041	171,489	163,552
2	680,641	347,452	333,189	301,194	154,298	146,896	379,447	193,154	186,293
3	684,823	347,482	337,341	297,820	150,620	147,200	387,003	196,862	190,141
4	685,870	348,431	337,439	297,864	151,426	146,438	388,006	197,005	191,001
<b>0 - 4</b>	<b>3,405,406</b>	<b>1,731,787</b>	<b>1,673,619</b>	<b>1,541,391</b>	<b>783,017</b>	<b>758,374</b>	<b>1,864,015</b>	<b>948,770</b>	<b>915,245</b>
