

# ACCRA METROPOLITAN AREA (AMA) DISTRICT MULTIDIMENSIONAL POVERTY FACT SHEET

## Summary

- This fact sheet summarizes the multidimensional poverty statistics for Accra Metropolitan Area (AMA), based on the 2021 PHC. It shows the incidence (*who is poor?*), intensity (*how poor are the poor?*), deprivation in 13 indicators (*what are people in the district lacking?*), and the contribution to multidimensional poverty (*how is poverty experienced?*). For information on multidimensional poverty and methodology, refer to: <https://statsghana.gov.gh/MPI-Primer.pdf>
- In AMA, 11.1 per cent of the population live in multidimensional poverty and the average intensity of poverty is 43.9 per cent. This means that in AMA the Multidimensional Poverty Index is estimated to be 0.049.
- AMA is placed 32nd out of the 261 districts in terms of the percentage of population living in multidimensional poor households. Within the Greater Accra Region it is placed 17th out of 29 districts (*a lower number indicates less poverty*).
- AMA is most deprived in the areas of improved toilet facilities (79.7%), lack of health insurance coverage (57.2%), and overcrowding (41%). For four out of 13 indicators, AMA had a higher deprivation than the national averages.

## Incidence and Intensity

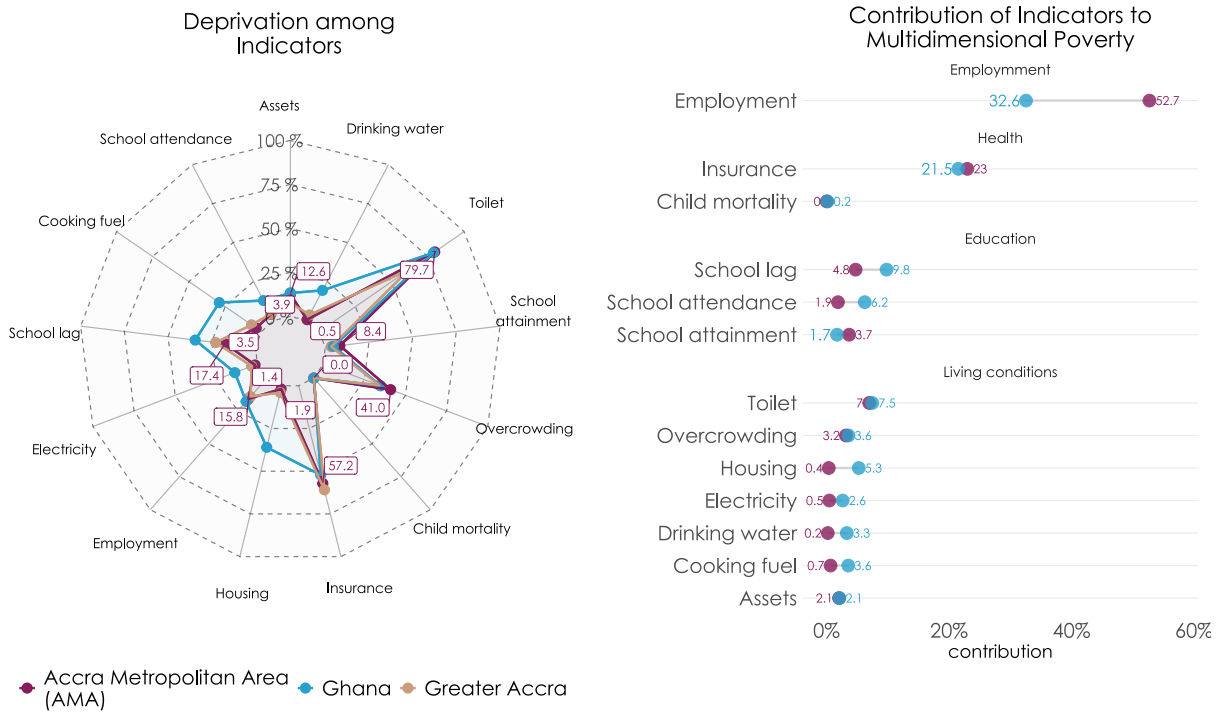

This plot shows the multidimensional poverty incidence and intensity for AMA and Greater Accra Region, as well as the national statistics. Additionally, data are disaggregated by locality type, and the sex, industry of employment, and education level of the household head.<sup>1</sup>

<sup>1</sup>In districts where there are no urban or no rural areas, no data is presented for that locality type

# Deprivation and Contribution

The plot on the left shows the average uncensored deprivation (between 0% and 100%) of the 13 different indicators in AMA as compared to regional and national average. The plot on the right shows the contributions to multidimensional poverty (sums to 100%).

# Multidimensional Poverty Hotspots

This map shows both the percentage of multidimensional poor people as well as the total number of multidimensional poor per 1000m by 1000m grid. Values are normalized, being relative to the district itself rather than to Ghana as a whole and areas without population are coloured grey.
