POVERTY REPORT**

Nabdram District

MAP OF NABDAM DISTRICT

FOREWORD

The Ghana 2021 Population and Housing Census (PHC) was conducted to provide updated demographic, social and economic data for research, policy and planning to support national development activities and track the implementation of national, continental, and global development goals.

The 2021 PHC is the first to make available Multidimensional Poverty statistics on all 261 Metropolitan, Municipal and District Assemblies (MMDAs) in Ghana. The report covers various dimensions of poverty: Incidence (headcount) and intensity on different aspects of living conditions (electricity, housing, assets, overcrowding, cooking fuel, toilet facility and drinking water), education (attendance, attainment, and school lag), health (insurance coverage and mortality) and employment (employed).

This report targets the District Planning and Coordination Unit, Development Partners; Civil Society Organisations (CSOs); Private Sector; Research Institutions, Academia, Religious Organizations, Traditional Rulers; and the public. The report provides relevant and timely data to support implementation and monitoring of the Medium-Term National Development Policy Framework (MT-NDPF), 2022-2025: An Agenda for Jobs: Creating Prosperity and Equal Opportunity for All which aims, among others, to institute policies and programmes to reduce poverty in all forms and dimensions and minimise inequality among socio-economic groups and between geographical areas.

Specifically, the statistics on the different dimensions of poverty can be used to identify subgroups as well as populations with multiple deprivations, their characteristics, and locations. This will engender the development of appropriate social protection policy interventions by the Ministry of Gender, Children and Social Protection and other relevant stakeholders.

The disaggregated statistics will also support the monitoring of progress towards SDG 1 (end poverty in all its forms everywhere), SDG 3 (ensure healthy lives and promote wellbeing for all at all ages), SDG 4 (ensure inclusive and equitable quality education and promote lifelong learning opportunities for all), SDG 10 (reduce inequality within and among countries) and SDG 11 (make cities and human settlements inclusive, safe, resilient and sustainable). This report is expected to serve as a strategic tool for informing policymaking and implementing targeted interventions, while also providing baseline data for measuring progress towards eliminating poverty in all its forms in Nabdam District.

HON. DR. HAFIZ BIN SALIH

(REGIONAL MINISTER)

HON. AGNES ANAMOO

(DISTRICT CHIEF EXECUTIVE)

ACKNOWLEDGEMENT

The Ghana Statistical Service (GSS) extends its gratitude to the German Agency for International Cooperation (GIZ) for its funding support in producing the first-ever Multidimensional Poverty Report for all Metropolitan, Municipal, and Districts in Ghana.

We also wish to express our thanks to the Ministry of Local Government, Decentralization and Rural Development (MLGDRD), and all Metropolitan, Municipal, and District Assemblies (MMDAs) for their cooperation and support, which greatly contributed to the successful completion of this report.

We gratefully acknowledge the expertise and resources provided by GSS and the World Bank through the Harmonizing and Improving Statistics in West Africa Project (HISWAP), which have significantly contributed to the dissemination of this report.

Finally, we appreciate the diverse expertise contributed by other stakeholders in the preparation of this report.

1. PROFILE OF NABDAM DISTRICT

Nabdram District's population in 2021 was 53,039 with more females (26,904), representing 50.7 percent than males (26,135) constituting 49.3 percent. The District occupies a land size of 251 Km² with a population density of 206.5 persons per square kilometre. The District shares boundaries with Bongo District to the North, Talensi District to the South and Bawku West District to the East and Bolgatanga East District to the west.

Administratively, it has 3 area councils, made up of 13 elected Assembly Members and 6 Government Appointees.

The main ethnic group in the District is Mole-Dagbani (96.6%), and distantly followed by Akan (2.1%), with the remaining ethnic groups (Grusi and others) constituting 1.3 percent.

More than 50.0 percent (52.8%) of the District's population are affiliated to the Christian Religion, followed by 41.2 percent who are Traditionalists and 2.6 percent Muslims. About 3.4 percent of the population belong to Other Religions and those with No Religion.

The District has a literacy rate of 45.9 percent of the population 6 years and older, which is higher among males (47.6%) than females (44.2%). The District's population 15 years and older are mainly engaged in the services sector (45.4%), followed by agriculture (43.5%) and industry (11.1%).

FIGURE 1.1. LOCATION OF NABDAM DISTRICT IN GHANA

1.1 History of Poverty Measurement

In the past, poverty measurement focused mainly on income deprivation to evaluate the living conditions and overall well-being of a population. While monetary poverty is closely associated with socioeconomic status, it is now widely recognized that poverty is multidimensional (Sen, 1999; Oshiro and Kan, 2014; Su-Jung, 2020). Therefore, using a multidimensional approach to assess poverty provides a more thorough understanding of the population, complementing traditional monetary poverty statistics (Alkire, 2020).

Statistics on multidimensional poverty are essential to guide national development. It is a valuable source of information about the distribution and changes in the general wellbeing of the population for decision makers and other stakeholders. The multidimensional poverty also captures overlapping deprivations experienced by poor people in the country, using thirteen non-monetary indicators across four dimensions - education, health, living standards and employment. Apart from capturing multiple indicators, the MPI also aids in identifying deprived people

and their location for policy interventions to enhance their quality of life. Houghton & Chandkor, 2009 identifies four reasons why measuring poverty through the lenses of MPI is crucial. These are keeping the underprivileged at the forefront of political and economic discussions, allocating development funds to areas with high rates of poverty, monitoring and assessing the success of initiatives designed to lift people out of poverty, and assessing the efficiency of institutions in the fight against poverty.

Ghana has experienced a continuous reduction in its monetary poverty over 25 years from 51.7 percent in 1991/1992 to 23.4 percent in 2016/2017 (GSS, 2000; 2018). Similarly, severe poverty has also declined from 36.5 percent to 8.2 percent over the same period. In the last few years, a more deprived population (45.6%) has been recorded from a multidimensional perspective (GSS 2020). This implies a more deprived population in terms of a non-monetary measure of poverty.

The Sustainable Development Goal (SDG) 1, “End poverty in all its forms everywhere,” is multidimensional in form and definition. More specifically, SDG Target 1.2 seeks to “by 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions”. This implies that consumption expenditure poverty measurements, which is traditionally done in Ghana, may not provide adequate information on the different pathways through which the population experiences poverty. Computation of Multidimensional Poverty index (MPI) provides the opportunity for country specific context and a complementary measure of poverty.

1.2 Purpose of Multidimensional Poverty Index in Ghana

In the past, many countries measured poverty only by consumption or income. There is no one indicator (such as consumption or income) which can capture the multiple n developed by the Oxford Poverty and Human Development Initiative (OPHI) and the United Nations Development Programme Human Development Report Office (UNDPHRO). The MPI complements monetary poverty measures by reflecting the deprivations that people face simultaneously in other dimensions, which are also essential to guarantee a dignified life.

The purpose of Ghana's National Multidimensional Poverty Index is to monitor key simultaneous disadvantages that affect multidimensionally poor people at the sub-national level. The District MPI therefore reflects both the incidence of poverty – what proportion of people are poor - and the intensity of poverty – how poor they are. The District MPI is broken down by different dimensions and indicators and reveal who is poor, the dimensions they are poor in and the degree of their deprivation. The purpose for the District MPI for Ghana is as follows:

1. provide targeted interventions for the allocation of resources.
2. monitor and evaluate local government development programmes.
3. track trends of multidimensional poverty.
4. monitor progress across a range of interlinked Sustainable Development Goals (SDGs) and targets at the sub-national level.

The report presents statistics on the proportion of the population that is multidimensionally poor, focusing on household size, sex, age, locality, education level, employment sector, and marital status. These variables are selected based on Ghana's Medium-Term National Development Policy Framework (MTNDPF) 2022-2025, which aims to provide equal opportunities for all and the SDGs' promise to leave no one behind.

1.3 Organisation of Report

The structure of the report begins with a profile of the district and a brief history of poverty measurement, outlining its purpose. It then details the methodology used, followed by definitions of key concepts and highlights of the results. The report ends with conclusion and main tables, accompanied by appendices.

2. METHODOLOGY

This report utilises data from the 2021 Population and Housing Census to measure multidimensional poverty and adopts the Alkire- Foster (AF) methodology. This approach considers three poverty dimensions: living conditions, health and education measured across 12 indicators. However, to better reflect development priorities at the sub-national level, Ghana adjusted and contextualized the Global MPI approach to include employment as a fourth dimension. The dimensions used for the Districts MPI computation are living conditions (cooking fuel, water, assets, housing, overcrowding, electricity, toilet); education (school attendance, school attainment and school lag); health (mortality and health insurance coverage); and employment (employed) with a poverty cut-off point of 33.3 percent. This means that a person is considered multidimensionally poor if he/she is deprived in at least one-third or more of the weighted indicators. This cut-off point aligns with the global MPI standard, indicating that a person must be deprived in at least one full dimension's worth of indicators to be classified as multidimensionally poor.

TABLE 2.1. GHANA'S NATIONAL MPI – INDICATORS, DEPRIVATION CUT-OFFS AND WEIGHTS

Dimension	Indicator	Deprivation cut-off definition	Indicator Weights	Dimension Weight
Living Standards	Cooking fuel	Deprived if household uses solid fuels and cooking is not done outside the house or in the open/ or cooking is undertaken in enclosed spaces	1/28	1/4
	Water	Deprived if a household's drinking water is from an unclean source (tanker supply/vendor provided; unprotected well; unprotected spring; river/stream; dugout/pond/lake/dam/canal; other) or a round trip distance to collect water takes 30 minutes or more	1/28	
	Assets	Deprived if household does not have more than one small asset (radio, TV, telephone, bike, motorbike, refrigerator, or computer) and does not own a car	1/28	
	Housing	Deprived if household uses inadequate flooring (earth/mud, other) or walls (earth/mud, palm leaves/thatch (grass/raffia), other)	1/28	
	Overcrowding	Deprived if household on the average has more than three people per sleeping room	1/28	
	Electricity	Deprived if household does not have electric power	1/28	
	Toilet	Deprived if household has no toilet facilities, uses bucket/pan, public toilet, shared toilet outside the house, other	1/28	
Education	School attendance	Deprived if any school-age child (4-15years) in the household is not attending school	1/12	1/4
	School attainment	Deprived if no household member has received at least 9 years of schooling	1/12	
	School lag	Deprived if household has any member who is 2 or more years behind in school compared to the expected age and grade relationship	1/12	
Health	Mortality	A household is deprived if either a child (less than 5 years) or a pregnant mother died in the household	1/8	1/4
	Health insurance	Deprived if anyone in the household is not covered by the national health insurance scheme	1/8	
Employment	Employed	Deprived if no member 15 years and older in the household is employed	1/4	1/4

For a more detailed explanation of the Alkire-Foster approach employed in this report, you can visit the GSS website at (<https://statsghana.gov.gh/>).

3. DEFINITION OF CONCEPTS

3.1 Multidimensional Poverty

This is a non-monetary measure of poverty that reflects the various areas in which the population may be deprived of their needs. It considers four dimensions; living conditions, health, education, and employment; across 13 indicators. The indicators for living conditions include cooking fuel, water, assets, housing, overcrowding, electricity, and toilet facilities. For education, the indicators are school attendance, school attainment, and school lag. Health is measured through mortality and health insurance coverage, while employment is measured by whether individuals are employed.

3.2 Incidence of Poverty (Who is Poor?)

This refers to the percentage of people who are multidimensionally poor. It is also called the headcount ratio.

3.3 Intensity of Poverty (How Poor are They?)

This measures how poor the poor people are. It shows how severe their poverty is by comparing how much worse off compared to the poverty cutoff.

3.4 Censored Headcount Ratio

The censored headcount ratio of an indicator is the percentage of the total population – or one of its subsets – who are deprived in that indicator. The weighted sum of the censored headcount ratios constitutes MPI. This means that a decrease in any deprivation of any poor person will decrease poverty as measured by the MPI. The censored headcount ratios only count a deprivation when the person who experiences it is also multidimensionally poor.

3.5 Uncensored Headcount Ratio

The uncensored headcount ratio' of each indicator represents the proportion of the total population who are deprived in that indicator, irrespective of their poverty status. i.e., the percentage of all people – poor and non-poor – who are deprived in that indicator.

3.6 The MPI (Adjusted Headcount Ratio)

This is the product of incidence and intensity. It shows the share of possible deprivations that poor people experience. MPI ranges from zero to one, and a higher number signifies greater multidimensional poverty.

3.7 Household

This refers to a person or a group of two or more persons (related or unrelated) who live together, share housekeeping arrangements (eating and sleeping) and recognise one person as the head.

3.8 Head of Household

The head of household is a member of the household who is acknowledged by the other members as the head and has the primary responsibility for making major decisions on the household's living arrangements. The person, who could be either a male or female, may or may not be the main income earner of the household.

3.9 Sex of Head of Household

This refers to the sex of the primary decision-maker in a household and is categorized as either male or female.

3.10 Household Size

Household size is the number of persons who live in households and share the same living arrangements

3.11 Household Population

Refers to persons enumerated in households and are usual members and visitors to the household.

3.12 Economic Activity

This refers to work that contributes to economic production of goods and services. With regards to the Ghana 2021 Population and Housing Census (PHC), the reference period was the seven days, before Census Night (i.e. 21st – 27th June, 2021).

3.13 Economic Sector

Economic sector refers to the type of industry in which an individual is employed. These sectors are grouped as:

- a. Agriculture
- b. Industry
- c. Services

3.14 Sector of Employment

Employment sector refers to the legal organization and principal functions of the institution or enterprise with which a person is engaged. Employment sectors are categorised in this report as:

- a. Public (Government)
- b. Private Formal
- c. Private Informal
- d. Local NGO/CSO
- e. International NGO/CSO
- f. Religious Organisation (Local)
- g. Religious Organisation (International)
- h. International Organization

3.15 Level of Education

The level of education refers to the educational stages or subdivisions of formal learning attained by a person aged 12 years and older. Level of Education is categorized as:

- a. No education
- b. Basic
- c. Secondary
- d. Post secondary and
- e. Tertiary

3.16 Locality and Type

A locality is defined as an inhabited geographical area with a distinct name. Type of locality is classified in this report as either urban or rural where urban is a locality with a population of 5,000 or more and rural with a population of less than 5,000.

3.17 Marital Status

This is the civil status of a person aged 12 years or older as at Census Night. It may be one of the following cases:

- a. Informal consensual union living together: A person living together in a marital union but without civil or traditional recognition.
- b. Married: A person married under civil ordinance, customary traditional and Islamic rites, whether registered or not.
- c. Separated: A person who no longer has common living arrangements with the spouse but whose marriage has not been declared customarily or legally dissolved.
- d. Divorced: A person whose marriage has been annulled or dissolved either in a court of law or by custom and has not remarried.
- e. Widowed: A person whose last marriage ended because of the death of a spouse and has not remarried as at Census Night.
- f. Never married: A person who has never entered into any formal or informal marital union.

3.18 Grid of 1km by 1km

Refers to a one-square-kilometer measurement, commonly used in population analysis and urbanization assessments.

4. HIGHLIGHTS OF RESULTS

Statistics presented in this section are generated using data from the 2021 Population and Housing Census.

A total of 35,768 (68.6%) of the 52,138 household population in Nabdam are multidimensionally poor. Among the poor, the degree of poverty is 51.2 per cent.

FIGURE 4.1. INCIDENCE AND INTENSITY OF MULTIDIMENSIONAL POVERTY

The dominant forms of deprivations are employment (21.5%), health insurance coverage (7.2%), and school lag (4.4%).

FIGURE 4.2. DEPRIVATION IN 13 INDICATORS

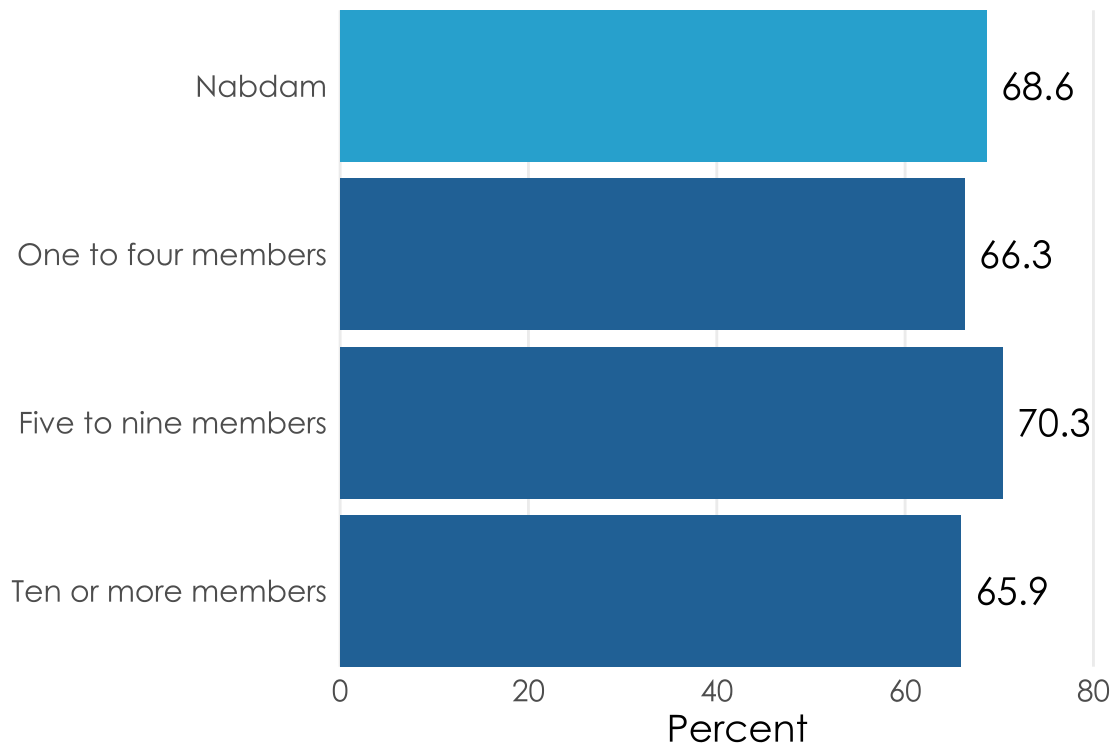

Three (employment (41.9%), health insurance coverage (14.1%), and school lag (8.5%)) of the thirteen indicators, contribute 64.5 percent to the incidence of poverty in the District.

FIGURE 4.3. CONTRIBUTION OF INDICATOR TO MULTIDIMENSIONAL POVERTY

Households with five to nine members (70.3%) are most likely to experience multidimensional poverty, compared to households with ten or more members (65.9%).

FIGURE 4.4. MULTIDIMENSIONAL POVERTY BY HOUSEHOLD SIZE

Multidimensional poverty is higher among households headed by females (71.0%) compared to males (67.8%).

FIGURE 4.5. MULTIDIMENSIONAL POVERTY BY SEX OF HEAD OF HOUSEHOLD

The contribution of deprivation in employment to multidimensional poverty is higher among households headed by both females (42.6%) and males (41.7%).

FIGURE 4.6. CONTRIBUTION TO MULTIDIMENSIONAL POVERTY BY SEX OF HEAD OF HOUSEHOLD

Multidimensional poverty is higher for households whose heads are younger (15-19 years: 83.7%) and the elderly (60-64 years: 69.9%).

FIGURE 4.7. MULTIDIMENSIONAL POVERTY BY AGE OF HOUSEHOLD HEAD

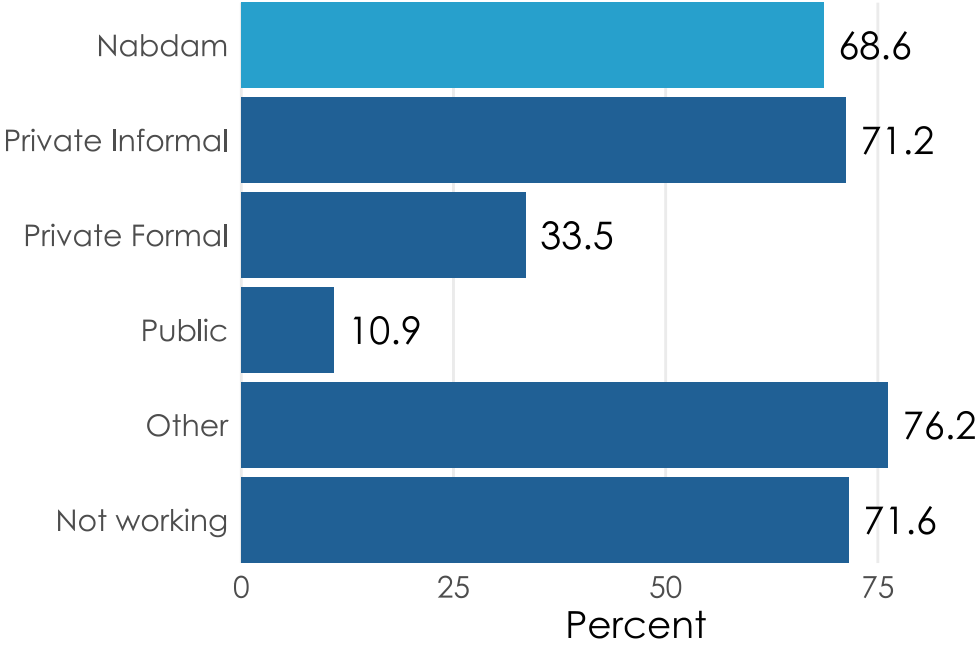

Households whose heads have basic education (66.8%) are 6.4 percentage points less poor compared to those with no education (73.2%).

FIGURE 4.8. MULTIDIMENSIONAL POVERTY BY EDUCATIONAL LEVEL OF HEAD OF HOUSEHOLD

Multidimensional poverty for households' heads who did not work (76.2%) is more than 1.5 times as high as those who worked which averaged about 47.9 percent across the sectors of employment.

FIGURE 4.9. MULTIDIMENSIONAL POVERTY BY SECTOR OF EMPLOYMENT OF HEAD OF HOUSEHOLD

Households whose heads are working in the agricultural sector (74.6%) are poorer than those in the other two sectors:

- more than 4.9 times poorer than those in service and
- about 2.6 times worse off than those in the industry sector.

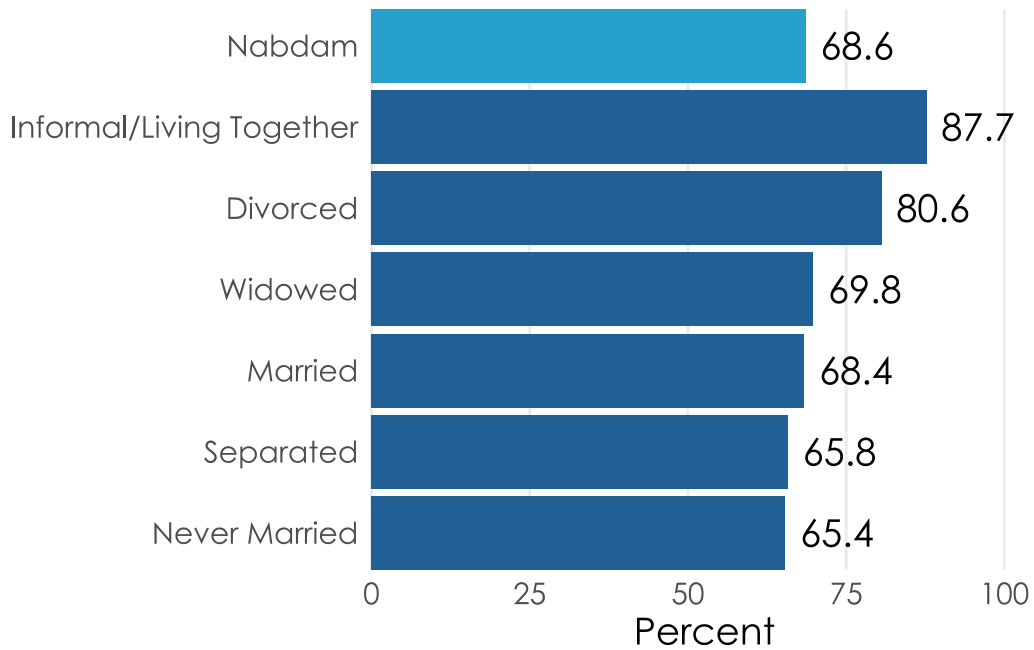

FIGURE 4.10. MULTIDIMENSIONAL POVERTY BY ECONOMIC SECTOR OF HEAD OF HOUSEHOLD

Incidence of multidimensional poverty is lowest for households whose heads are never married (65.4%):

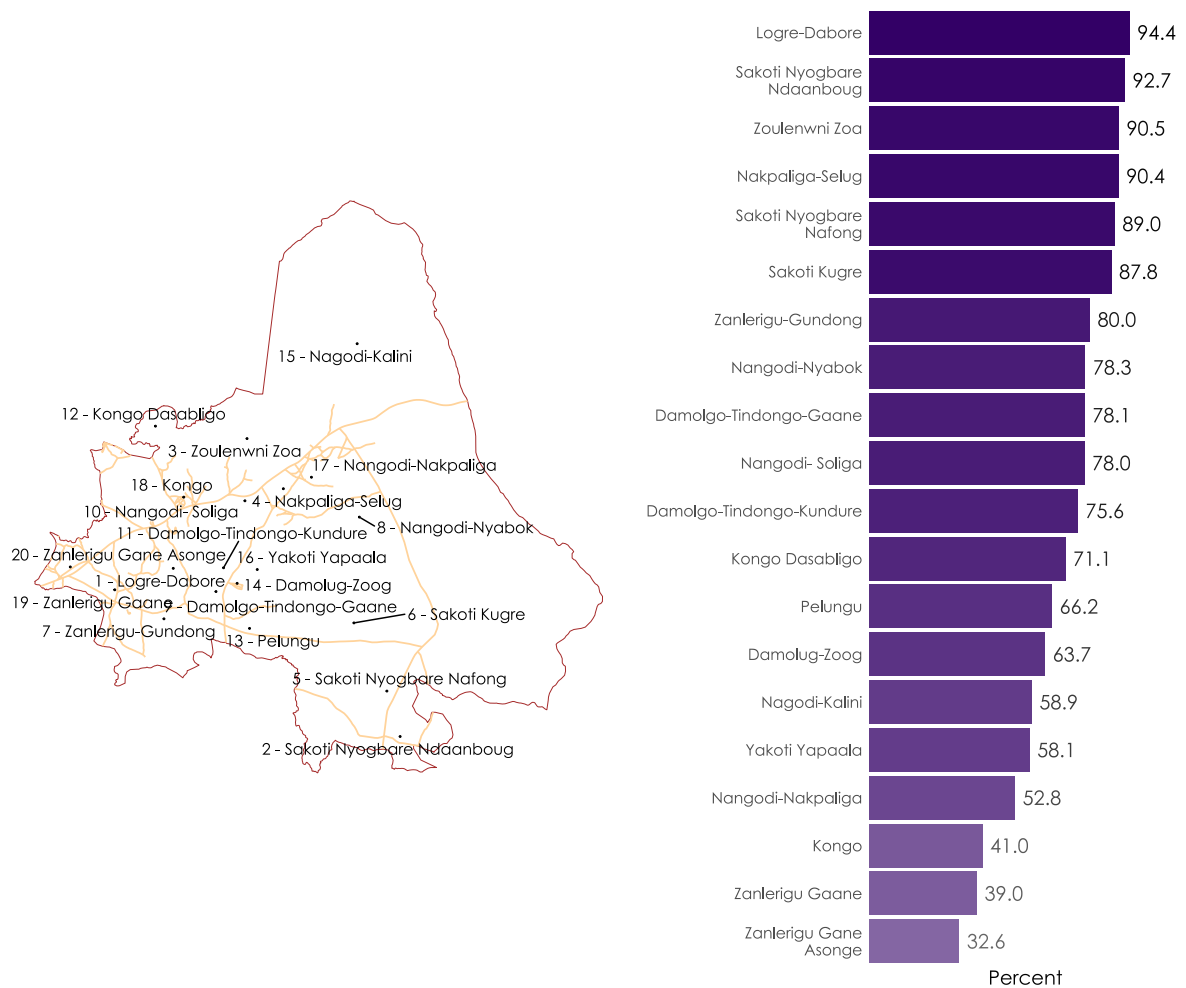

- about 1.3 times less poor than those who are informal/living together.

FIGURE 4.11. MULTIDIMENSIONAL POVERTY BY MARITAL STATUS OF HEAD OF HOUSEHOLD

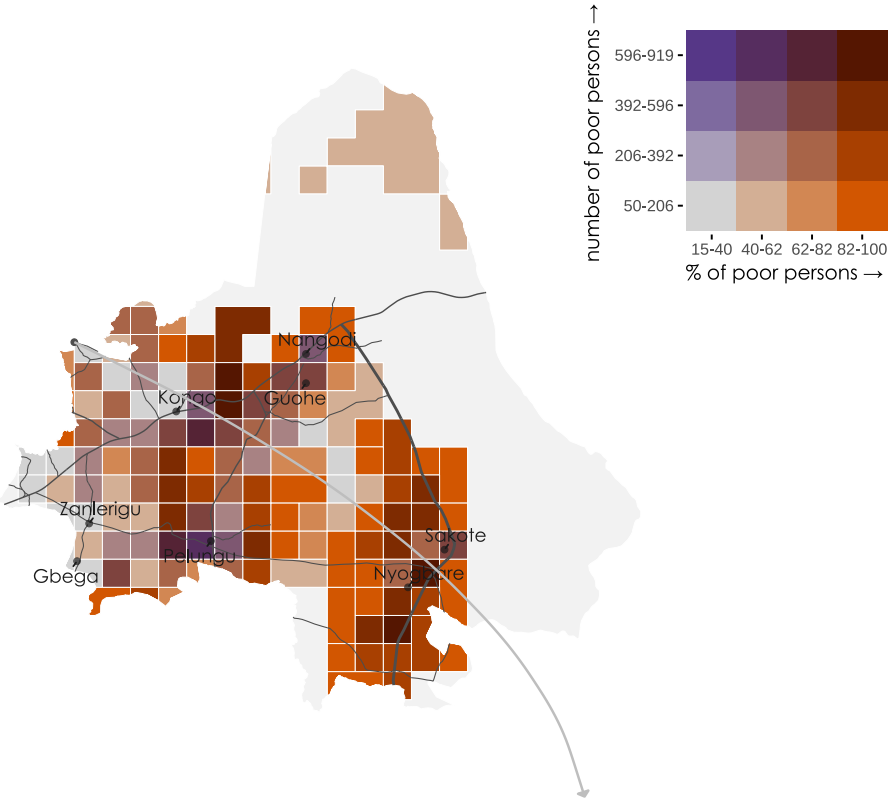

Among the largest localities in Nabdram, the incidence of multidimensional poverty range from 94.4 percent in Logre-Dabore to 32.6 percent in Zanlerigu Gane Asonge.

FIGURE 4.12. INCIDENCE OF MULTIDIMENSIONAL POVERTY IN THE LARGEST LOCALITIES

Multidimensional poverty range from 100.0 percent to 14.7 percent at a lower level of disaggregation (population gridded at a 1km by 1km area).

FIGURE 4.13. INCIDENCE OF MULTIDIMENSIONAL POVERTY OF 1KM BY 1KM GRID

The legend shows that, about 50 to 206 persons in the area covered by the pointed grid cell are poor, corresponding to about 15% to 40% of the population being poor.

The proportion of the population living in multidimensional poverty in Nabdam (68.6%) ranks 15th out of the 15 districts in the Upper East Region, compared to Bolgatanga Municipal (20.2%), the lowest.

FIGURE 4.14. MPI OF NABDAM COMPARED TO OTHER DISTRICTS IN UPPER EAST REGION

The proportion of the population living in multidimensional poverty in Nabdam (68.6%) ranks 261st out of Ghana's 261 districts.

FIGURE 4.15. MPI OF NABDAM COMPARED TO OTHER 260 DISTRICTS IN GHANA

5. CONCLUSION

The report highlights specific areas of deprivation that contribute to multidimensional poverty in the district.

Overall, approximately seven out of ten people in the District are poor. The highest proportion of deprivation is observed in employment, health insurance coverage, school lag and unimproved toilet. Employment and health insurance coverage are the largest contributors to multidimensional poverty in the district. Multidimensional poverty is predominant in households headed by persons working in the private informal or, agriculture sector, as well as those who have never attended school. Additionally, it is notably prevalent among households headed by young persons.

The findings of this report provide evidence for the formulation of poverty reduction strategies and targeted interventions. Policymakers and stakeholders can utilise this information to develop and implement policies aimed at not only reducing poverty but also promoting equitable growth. These efforts are essential for advancing Ghana's development agenda and achieving the 2030 Sustainable Development Goals (SDGs).

6. MAIN TABLES

TABLE 6.1. DISTRICT LEAGUE TABLE OF MULTIDIMENSIONAL POVERTY INDEX (MPI)

	Region	District	Household Population	Number of persons living in multidimensionally poor households	Percent of persons living in multidimensionally poor households	Rank of percent of persons living in multidimensionally poor households
1	Ashanti	Asokwa Municipal	123,680	7,798	6.3	1
2	Greater Accra	Ashaiman Municipal	206,690	15,476	7.5	2
